waxy texture; late, 2 ft.....	5.00	
8.3 (Saunders)		
Wild Rose—Smooth, satiny pink; 2 ft.....	each 4.00	

The most desirable time for transplanting Iris is from after the blooming season to September. They require a fairly sunny location and should be planted so that the rhizome can bake in the sun. This part of the root should be about level with the ground. Bone meal is the best fertilizer for Iris. Avoid manure.
